

**We update our
understanding of the
purpose of the product and
why it matters to our
stakeholders**

**We reject suggestions for
the Product Backlog based
on the budget or the time
we have available**

We clean up the Product Backlog by removing what doesn't fit the purpose of the product or the budget (anymore)

**During our Sprint Reviews,
we verify with
stakeholders if our work is
valuable to them and
works as expected**

We validate our assumptions about the product with people that actually use the product or significantly invest in it with their time and/or money

**We work with stakeholders
to clarify and refine work
and to test assumptions**

**We measure the
satisfaction of our
stakeholders and/or the
value we're delivering
to them**

We see collaboration with stakeholders as a shared responsibility (not just the Product Owner's)

**We ship to production
during or soon after
a Sprint**

**We work with
management to make it
easier to ship faster and
safer (e.g. new tools, red
tape is removed)**

**We remove impediments
that make it hard for us to
ship faster and safer**

**We quickly respond to
bugs or critical needs from
our stakeholders**

**We improve our tools
and technologies to
make it easier to ship
faster and safer**

We refine items on our Product Backlog so that they become small enough to complete in a single Sprint

We demonstrate to our stakeholders how shipping fast helps us to reduce risk and create a competitive advantage

**We make an effort to
reduce how often we have
to depend on other teams
or individuals outside our
team to get something to
“Done”**

**We trust in each other's
ability and professionalism
to do the right thing for
our team**

**We help each other when
someone is stuck**

**We make sure that each
Sprint Retrospective
results in at least one
tangible improvements for
the next Sprint**

**We celebrate our
successes, both large
and small**

**We inspect metrics to
improve how we do
our work**

**We bring in new
knowledge and experience
by reading books, going to
meetups or participating in
workshops**

**We explore new tools,
technologies and practices
that can help us become
more effective**

**We challenge existing
rules, beliefs and
procedures when they get
in the way of doing our
work effectively**

**We change the
composition of our team as
needed to do our work**

**We change the tools,
technologies and practices
when we discover better
ways to do our work**

We decide what is on the Product Backlog and in what order, without requiring approval from people outside the team

**We spend time to identify
solutions to the
challenges that we face
and the problems we run
into as a team**

We resolve most of the problems we run into as team, without requiring people outside our team

**We spend time with other
Scrum Teams to identify
solutions for shared
challenges**

We create a Sprint Goal for each of our Sprints that captures an important objective for our product or organization

**We collaborate with other
Scrum Teams and
departments to overcome
shared impediments**
