

Business Value Cheatsheet

(for product development)

I think that this backlog item results in value because it has

Check?

Commercial Value?

Please explain why ...

☐

How much profit or revenue will this generate?
Like a new version or a feature that customers will pay for, work that can be billed, reducing operating costs or increasing what customers are willing to pay.

Check?

Market value?

Please explain why ...

☐

How many new customers will we be able to serve?
Like porting an application to another platform, adding features that the competition doesn't have or adding functionality that draws in new users.

Check?

Efficiency value?

Please explain why ...

☐

How much time or money will this save us?
Like automating work that is error-prone or tedious, improving stability or removing bugs or decreasing time-to-market.

Check?

Customer value?

Please explain why ...

☐

To what extent will this decrease the likeliness that customers will abandon our product?
Like adding frequently requested functionality, improving usability or make it easier / faster to use.

Check?

Future value?

Please explain why ...

☐

How much time or money will this save us in the future?
Like learning about new technologies, reducing technical debt, developing a new framework or improving relations with customers.
